

RaceDay Database Test Evidence

Purpose

This document records the database testing completed for the RaceDay Programming 2B PoE Part 1 submission.

Clean Database Rebuild

The RaceDay database was deleted from the local SQL Server instance and recreated by executing the complete `RaceDay_Database.sql` script.

The script successfully:

1. Created the RaceDay database.
2. Created all six tables.
3. Created the required primary keys.
4. Created the required foreign keys.
5. Created database constraints.
6. Inserted the required sample data.
7. Completed the verification query successfully.

Verification Results

Table	Records
EventType	3
User	4
Event	3
Category	7
Enrolment	4

Table	Records
Result	2

Foreign Key Verification

The foreign-key verification query successfully confirmed the relationships between Event, EventType, User, Category, Enrolment and Result.

Conclusion

The RaceDay SQL script successfully recreates the database structure and required sample data from a clean SQL Server environment.
