

RaceDay API Design Rules

Purpose

This document defines the main rules that will guide the future RaceDay RESTful API implementation.

Authentication

Public endpoints may be accessed without signing in.

Protected endpoints require an authenticated RaceDay user.

Authorisation

Organiser

Organisers may:

- Create events
- Update events
- Delete events
- Manage event categories
- View enrolments for events they manage
- Record and update participant results

Participant

Participants may:

- View their profile
- Browse events
- Enrol in events
- Select an event category
- View their own enrolments
- View their own race results

HTTP Methods

Method	Purpose
GET	Retrieve information
POST	Create a new resource
PUT	Update an existing resource
DELETE	Remove a resource

Validation Rules

The API must validate required request fields.

Event IDs and Category IDs must reference existing records.

A Participant must not enrol in the same Event more than once.

A Participant must not select a Category belonging to another Event.

A finishing position must be greater than zero.

A Result must belong to an existing Enrolment.

HTTP Response Codes

Code	Meaning
200	Request completed successfully
201	Resource created successfully
204	Request completed with no response body
400	Invalid request
401	Authentication required or failed
403	User does not have permission

Code	Meaning
404	Requested resource was not found
409	Request conflicts with existing data
