

RaceDay Part 1 Video Presentation Guide

1. Introduction

Introduce RaceDay as a web-based event management system for South African road running, walking and cycling events.

2. GitHub Repository

Show the RaceDay GitHub repository and explain the main folders.

3. Documentation

Open the docs folder and show the ERD, API Endpoint Plan and SQL script.

4. ERD

Open RaceDay_ERD.pdf.

Explain the six entities:

- User
- Event
- EventType
- Category
- Enrolment
- Result

5. Relationships

Explain the important relationships and cardinalities.

6. Primary and Foreign Keys

Point out the primary keys and foreign keys in the ERD.

7. API Endpoint Plan

Open RaceDay_API_Endpoint_Plan.pdf.

Explain the Authentication, User Profile, Events, Categories, Enrolments and Results sections.

8. Role-Based Access

Explain why Organisers and Participants have different API permissions.

9. SQL Database

Open RaceDay_Database.sql in SSMS.

Explain the database tables and constraints.

10. Live SQL Execution

Execute the database script or demonstrate the completed database and verification queries.

11. Sample Data

Show the Organisers, Participants, Events, Categories, Enrolments and Results.

12. GitHub Actions

Open the GitHub Actions tab and show the successful green build.

13. Conclusion

Explain that Part 1 provides the database and API planning foundation for the later RaceDay implementation.
